

Email Inbox Integration

When you meet candidates at a Job Fair, they either forward their resumes to a particular email ID or click a pic of their resumes and send the same.

How do you ensure that you screen all these resumes to find the perfect candidate?

Our resume parser helps the users fetch data from various email inboxes at once. Email inbox integration allows users to parse resumes or jobs from single or multiple email inboxes. This feature requires a simple process and a quick one-time setup.

It also fetches data from scanned resumes, making it easy for the recruiters to shortlist candidates.

How Can Email Inbox Integration Fit into Your Business?

Get complete candidate information from resumes lying in your emails

Parse job descriptions from a single or multiple email inboxes

How Does Email Inbox Integration Help You?

Within less than 2 seconds, get resume/job data in your database
